Dear Mr. Colosio,

Thank you for the clarification and your honest response.

Following your explanation of the data usage restrictions, we have decided to exclude the IEA dataset from our project entirely. We confirm that the dataset will not be used in our research, analysis, or publicly shared project outputs.

Thank you for taking the time to clarify the licensing conditions.

Kind regards,
Kelden

CAUTION: This email originated from outside of UM. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Kelden,

Thank you for your clarification.

On the basis of your description, particularly as the proposed outputs could allow some of the underlying values to be inferred or recovered, your intended use would not be permitted.

Public use of IEA data is subject to the conditions set out in the Terms of Use for Non-CC Material. This includes the requirement that works derived from Non-CC Material, such as the World Energy Balances Highlights dataset, must not enable the underlying IEA material to be back-calculated, processed or re-engineered.

Furthermore, **public reproduction, such as within the GitHub repository, is limited to an Insubstantial Amount (no more than 5 data points) of IEA material**. Where more than five numerical data points (but still an Insubstantial Amount) are reproduced, they must be presented graphically or aggregated in such a way as not to enable the extraction of the underlying data.

If adapting the project to comply with these restrictions is not feasible, you will need to use an alternative data source whose licence permits the intended public dissemination.

Kind regards,

Riccardo Colosio
Data Sales Assistant
International Energy Agency

Subject: Re: Permission request: academic use of World Energy Balances Highlights (2026 edition)

Dear Mr. Colosio,

Thank you for your follow-up. I would like to be as transparent as possible about our intended use.

This is a university coursework project on global electricity consumption by country and end-use sector. Our course requires us to submit the source code, Jupyter notebooks and visualisations through a public GitHub repository. The raw IEA data files will not be uploaded or made available for download.

Our statistical tables, charts, maps and Dash/Plotly dashboard will be based on IEA data, so some outputs may show country, regional or sector values. I cannot guarantee that nobody could infer some of the underlying values from them. Preventing that entirely would mean changing our planned outputs, which would be very difficult with about three weeks left.

Could you please confirm whether this use, including the public sharing of the visualisations, statistical outputs and dashboard source code, is permitted under the IEA's licensing conditions? If it is not, please let us know so that we can switch to an alternative data source.

Thank you for your understanding and guidance.

Kind regards,

Kelden Jamtsho
University of Macau

Dear Kelden,

Thank you for completing the questionnaire.

I note that the raw IEA data files themselves will not be included in the GitHub repository. However, could you please confirm whether the underlying raw data will be made accessible under the form of statistical tables, charts, country and regional comparisons, maps, and the source code of the Dash/Plotly dashboard?

Furthermore, could you confirm that the derived results would not allow users to extract, or reverse-engineer the underlying data?

Kind regards,

Riccardo Colosio
Data Sales Assistant

Subject: Re: Permission request: academic use of World Energy Balances Highlights (2026 edition)

Dear Mr. Colosio,

Thank you for your clarification and for explaining the terms governing the use of the World Energy Balances Highlights dataset.

I understand that the raw dataset cannot be made available for download through GitHub, and that any reproduction of the data must comply with the conditions outlined in your Terms of Use. We will ensure that the raw dataset is not included in our public GitHub repository.

Our intended use is for an academic project as part of a university course, with the course running until January 2027. The public GitHub repository is required for our course submission and will contain our source code, notebooks, documentation, visualisations and project findings, but not the raw IEA dataset.

We also intend to present the findings through charts, maps and other visualisations, with appropriate attribution to the IEA. The Dash/Plotly dashboard will be developed to run locally; we do not plan to host or deploy it online.

I have completed the attached questionnaire with further details of our intended use. I would appreciate your review and guidance on whether our proposed use and publication of derived data and visualisations through the public GitHub repository would be permitted under your licensing conditions.

Thank you again for your assistance.

Kind regards,

Kelden Jamtsho
University of Macau

CAUTION: This email originated from outside of UM. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Kelden,

Thank you for your interest in our data.

Kindly note that the use of the World Energy Balances Highlights dataset is subject to our Terms of Use for Non-CC Material. Per these Terms, you are not permitted to make the dataset available for download to other users through GitHub. You can, however, reproduce insubstantial amounts of the data (fewer than 5 raw data points) in your report. Any further

inclusion of raw data points must be in graphical format where the individual data points are not identified or downloadable and proper attribution is given.

Furthermore, the creation and re-distribution of derived data based on our datasets is subject to specific licencing conditions. Could you please complete the attached questionnaire regarding you intended usage and return it to us? Once we have reviewed the information provided, we will be in a better position to advise you on licencing.

Kind regards,

Riccardo Colosio

You don't often get email from mc66418@connect.um.edu.mo. Learn why this is important

Dear IEA Rights and Permissions Team,

I am a postgraduate student at the University of Macau. Our semester project analyses how electricity consumption has changed across countries, regions and end use sectors between 1970 and 2022.

We downloaded the free World Energy Balances Highlights (2026 edition) Excel file from your website with a free IEA account, and we would like to use its data on final electricity consumption by sector. We have read the notice in the file, which says that external dissemination of IEA data, including within software or other tools, requires specific permission. Before going further, we would like to confirm what is allowed for this non-commercial, academic project.

Could you please confirm whether we may submit the project with the datasets along with the derived results and analysis, in the public GitHub.

Could you also tell us whether this citation is the form you want: IEA (2026), World Energy Balances Highlights, IEA, Paris, https://www.iea.org/data-and-statistics/data-product/world-energy-balances-highlights, Licence: Terms of Use for Non-CC Material.

Our project runs from 5 November to 2 December 2026, so a reply within that period would help us a great deal. Until we hear from you, we will not share the file or tables copied from it outside our team, and the dashboard will stay on our own machines.

Thank you for your time and for making these data available.

Kind regards,

Kelden Jamtsho
