SELF-DIRECTED PROJECT TEAM MEETING MINUTES

Complete, review, and circulate this record within 24 hours of each meeting.

1. Meeting Details

Item	Details
Project title	The Power-Hungry World: Comparing Global Electricity Consumption Across Sectors
Meeting no.	1
Date	Wednesday, 28 October 2026
Start / end time	20:00–21:00
Location / platform	In class, Building E4
Meeting chair / facilitator	Tang Jing (facilitator)
Minute taker	Tang Jing (Team Scribe)

2. Attendance

Team member	Present / absent / apology	Role or responsibility
UN CHI KIT (mc653081)	Present	Team coordinator and project tracker
KELDEN JAMTSHO (mc664183)	Present	Project analyst and quality reviewer
GAN RUIYAN (mc664801)	Present	Lead project developer
HE YIFEI (mc664916)	Present	Team reporter and team liaison
SHENG TIAN (mc664961)	Present	Second project developer
TANG JING (mc666256)	Present	Second project analyst and team scribe

3. Agenda

No.	Agenda item	Lead / presenter	Planned time
1	Opening, attendance and purpose of the first project meeting	Tang Jing	5 min
2	Review the three candidate topics and select the team topic	Jimmy / all members	15 min
3	Confirm the project title, global direction and preliminary research question	All members	10 min
4	Discuss team structure, roles and division of responsibilities	All members	15 min
5	Review the work plan, photo arrangements and submission milestones	Un Chi Kit / Tang Jing	10 min
6	Confirm decisions, action items and next steps	Tang Jing	5 min

4. Follow-up from Previous Meeting

Previous action or decision	Owner	Progress / evidence	Status	Further action required
First project team meeting – no previous meeting	All members	Initial discussion of project options and role allocation	First meeting	Continue with the agreed topic and action plan in Section 7.

5. Discussion Notes

Record of the main discussion and project planning.

Agenda item / topic	Discussion notes
5.1 Topic selection	The team reviewed three candidate topics compared in Jimmy's feasibility notes: (A) electricity consumption by sector, (B) inflation and unemployment, and (C) data-related job skills and salary. The initial Topic A evidence was based on a 1950–2024 U.S. EIA time series with clear changes in sector consumption. Topic B used multi-country inflation and unemployment observations but its pooled relationship was not statistically persuasive; Topic C used a smaller, older job-advertisement dataset and would need further source verification. Based on data accessibility, visual storytelling potential and manageable scope, the team selected Topic A. These were preliminary feasibility findings rather than results for the final global project.
5.2 Project title and global direction	After selecting Topic A, the team confirmed the project title, "The Power-Hungry World: Comparing Global Electricity Consumption Across Sectors." The intended research region is global, and the domain is electricity consumption by end-use sector. The U.S. feasibility analysis helps explain topic selection but does not, on its own, establish global findings. The proposal will identify data appropriate for comparisons across countries and regions.
5.3 Research question and proposal scope	The team outlined an initial statistical question: how has electricity consumption evolved across countries and regions, and how do sector shares differ? Three analysis directions were proposed for the Project Proposal: (1) trends over time, (2) national or regional comparisons and shares, and (3) sector composition and change. These are a planning framework; the final question, years, countries, sector definitions and units will be set after evaluating data availability. The team agreed to prioritize questions directly related to electricity consumption rather than broaden the project prematurely.
5.4 Data sources and methodology	The team planned to evaluate official international electricity datasets, including suitable IEA and UN energy statistics, and to list at least two accessible dataset links in the proposal. Data selection will consider coverage, definitions, dates, units, licences and missing values. The technical plan is to use Python for documented cleaning, unit conversion and source comparisons. Data from different sources will be combined only where definitions are compatible; source-specific values and any unexplained differences must remain traceable. Detailed dataset evaluations are assigned as follow-up work.
5.5 Validation and visualisation plan	The team discussed using descriptive statistics and clear charts to answer the core question. The planned visualisations include trends over time, comparative country/region rankings and sector shares. Dash and Plotly are possible tools for an interactive dashboard, subject to data and implementation feasibility. The proposal will also describe basic quality checks: consistency of totals and sectors, harmonised units, coverage gaps and comparison with an independent reference where possible. Generation mix and GDP/population analyses are potential extensions rather than required results.
5.6 Team structure and contributions	The six members discussed the combined roles described in Work Plan 01. Un Chi Kit will coordinate and track progress; Kelden Jamtsho will lead research design, source evaluation and quality review; Gan Ruiyan will lead the technical workflow; He Yifei will coordinate reporting, communication and introductory presentation; Sheng Tian will support development and visualisations; and Tang Jing will keep meeting minutes, help check analytical outputs and organise shared records. Major project decisions remain collective.
5.7 Proposal preparation and deadlines	The team planned the three deliverables due on 5 November: the Project Proposal, first meeting minutes and five-minute introductory video. The proposal will include a focused title and research question, purpose, geographical/domain context, at least two dataset links, tasks, success criteria, collaboration, a realistic timeline and at least seven APA-style references. Internal milestones are 2 November for research/data drafts, 3 November for integration and presentation/video preparation, and 4 November for final review. All six members must submit through their own Class G Moodle links by 5 November 2026, 23:00.

6. Decisions Made

No.	Decision	Reason / supporting evidence	Decision owner	Date agreed
1	Select Topic A: electricity consumption by sector.	The feasibility comparison supports a clear research problem and several interpretable visualizations.	All six members	28 Oct 2026
2	Confirm the global project title and research direction.	The team selected the title “The Power-Hungry World: Comparing Global Electricity Consumption Across Sectors.”	All six members	28 Oct 2026
3	Use three initial analysis themes for proposal development.	Trends, country/region comparisons and sector shares will be refined into a focused question once data is assessed.	All six members	28 Oct 2026
4	Confirm the six-member role distribution in Work Plan 01.	The combination of coordinating, analytical, development, reporting and recording roles covers the team’s needs.	All six members	28 Oct 2026
5	Evaluate global source compatibility before fixing technical scope.	The final dataset links, years, units, country coverage and sector mappings require source review.	All six members	28 Oct 2026
6	Use 2–4 November as internal preparation milestones.	Drafts, integration and review must be completed before the formal deadline on 5 November.	All six members	28 Oct 2026

7. Action Items and Task Assignments

Each task has one accountable member and a target date.

No.	Task / deliverable	Assigned to	Due date	Priority	Status / notes
1	Evaluate candidate global electricity datasets; supply dataset URLs, coverage, definitions and access conditions.	Kelden Jamtsho	2 Nov	High	Prepare comparison notes for the proposal; do not redistribute restricted raw data.
2	Draft the project purpose, research question, data context and APA reference material with Kelden.	He Yifei	2 Nov	High	Coordinate research content with Kelden.
3	Outline reproducible data preparation: source tracking, country mapping, unit conversion and sector harmonisation.	Gan Ruiyan	2 Nov	High	Work with the project analyst on data suitability.
4	Prepare chart concepts for consumption trends, country rankings and sector shares; assess a Dash/Plotly dashboard.	Sheng Tian	2 Nov	High	Prepare preliminary chart and dashboard concepts.
5	Integrate the proposal draft and organize PPT/storyboard and introductory video preparation.	He Yifei	3 Nov	High	Integrate the proposal and prepare video materials.
6	Track all deliverables, assemble proposal sections and coordinate course-brief compliance checks.	Un Chi Kit	3–4 Nov	High	Coordinate document assembly and checks.
7	Prepare minutes using the official template and maintain the team’s shared records.	Tang Jing	4 Nov	High	Use the course template; circulate the final record.
8	Review proposal, meeting minutes and introductory video; confirm each member’s Moodle submission.	All six members	4 Nov	High	Final Moodle deadline: 5 Nov 2026, 23:00.

8. Risks, Issues, and Support Needed

Issue, risk, or blocker	Impact	Owner	Resolution / support required	Target date
Potential data-source licence restrictions	May limit sharing of raw files	Kelden / all members	Check IEA terms and other source licences; share links or approved materials only.	Before sharing
Inconsistent country/sector definitions across sources	Risk of invalid comparisons	Kelden / Gan Ruiyan	Document mappings, units, coverage and source-specific differences before merging.	Before analysis
Global dataset coverage and verification	Could affect research question and conclusions	Kelden / team	Select sufficiently broad global data and identify independent checks for headline results.	2–4 Nov
Overly broad analysis or visualization scope	Delivery risk	All members	Prioritize the three core themes; reserve generation mix and GDP/population work as optional extensions.	Next review

9. Matters for Next Meeting

Matter to resolve / next agenda item	Preparation required	Responsible member
Confirm the final data sources and access conditions.	Share source links, coverage, years, sector details and licence conditions.	Kelden Jamtsho
Finalize the research question and operational scope.	Compare data definitions and propose the supported year range, sector grouping and unit.	Kelden / all members
Agree on data cleaning and validation procedures.	Prepare a concise plan for matching, unit conversion, missing data and cross-checks.	Gan Ruiyan / Kelden
Refine the dashboard and visualization plan.	Suggest filters, indicators and chart types that can be supported by the data.	Sheng Tian / Gan Ruiyan
Review proposal, minutes and introductory video readiness.	Bring updated sections, references, slides/video status and unresolved issues.	All members; Un Chi Kit to coordinate

10. Next Meeting

Item	Details
Date and time	Wednesday, 4 November 2026, 21:00–21:45
Location / platform	In class, Building E4
Proposed chair / minute taker	Un Chi Kit (coordinator) / Tang Jing (scribe)

11. Any Other Business (AOB)

Item / note	Follow-up or decision
IEA data access and sharing	Check the source terms before placing any IEA data files in the team repository. Share official links and instructions when needed.
Communication and record keeping	Team updates, deliverables and meeting records are kept in the shared repository and communicated through the team group chat.
Course submission	The proposal, first meeting minutes and introductory video are due on 5 November 2026 at 11:00 p.m. Follow the individual submission requirement stated on the relevant Class G Moodle links.

12. Review and Circulation

Item	Details
Minutes prepared by	Tang Jing (mc666256)
Prepared on	4 November 2026
Reviewed / approved by	For review by all Team 03 members before final submission.
Distribution / shared-storage location	Class G – Team 03 shared repository and team group chat; PDF for individual Moodle submission.
